

**WE CLAIM:**

1. A cover for an air bag device comprising:
  - an emblem attached to an outer side of the cover, the emblem including:
    - a main plate arranged to the outer side of the cover;
    - a connecting extension projecting from an outer periphery of the main plate in a rearward direction of the emblem;
  - wherein the extension is shaped as a plate and extends through a slit-shaped hole in the cover and includes a distal end that is bent; and
  - wherein a longitudinal direction of the slit-like hole extends in a direction that is substantially non-parallel to the surfaces of the plate shaped extension so that opposite ends of the extension are pressed against corners of the hole.
2. A cover for an air bag device comprising:
  - an emblem attached to an outer side of the cover, the emblem including:
    - a main plate arranged to the outer side of the cover;
    - a connecting extension projecting from an outer periphery of the main plate in a rearward direction of the emblem;
  - wherein the extension is shaped as a plate and extends through a slit-shaped hole in the cover and includes a distal end that is bent; and
  - wherein an opening area of a front part of the slit-like hole is greater than an opening area of a rear part of the hole so that the extension is clamped in place by a wall of the hole.
3. A cover for an air bag device comprising:
  - an emblem attached to an outer side of the cover, the emblem including:
    - a main plate arranged to the outer side of the cover;
    - a connecting extension projecting from an outer periphery of the main plate in a rearward direction of the emblem;

wherein the extension extends through a slit-shaped hole in the cover and includes a distal end that is bent; and

wherein the extension includes sides that are pressed against longitudinal ends of the hole.

4. A cover for an air bag device comprising:

an emblem attached to an outer side of the cover, the emblem including:

a main plate arranged to the outer side of the cover;

a connecting extension projecting from an outer periphery of the main plate in a rearward direction of the emblem;

wherein the extension extends through a hole in the cover and includes a distal end that is bent; and

wherein the extension includes an extended portion for engaging a rear side of the cover adjacent the hole.

5. The cover of claim 4, wherein the emblem further includes a projection that extends rearward from an outer periphery of the emblem for abutting against a front side of the cover.

6. A cover for an air bag device comprising:

an emblem attached to an outer side of the cover, the emblem including:

a main plate arranged to the outer side of the cover;

a connecting extension projecting from an outer periphery of the main plate in a rearward direction of the emblem;

wherein the extension extends through a hole in the cover and includes a distal end that is bent; and

an engaging portion provided on a rear side of the cover for engaging the bent distal end of the extension.

7. A cover for an air bag device comprising:

an emblem including a main plate and a plurality of tabs, wherein each tab extends away from the main plate in a different direction; and

an opening in the cover configured so that the main plate is fitted into the opening from a rear side of the cover; and

wherein at least one tab is embedded in the cover.
